

Task_1

You have a thermos product-selling e-commerce platform. Now, the client wants to implement a new feature, "Search". During the client meeting, they mentioned they wanted to make the search dynamic, with any keywords or specific text. Now you have a chance to get into more details on the feature. You can ask the client up to 10 questions. List the questions according to priority and add your feedback.

10 questions for the Client about SEARCH feature (Priority Order):

SL	Questions	Priority	Feedback
1	What fields should be searchable - product name, brand, category ?	High	Defines search scope.
2	Should there be a search button ?	-	Affects trigger behavior & UX.
3	Should search be case-insensitive ?		Basic expectation.
4	Do you want autocomplete/suggestions as the user types ?	-	Adds scope/cost.
5	What should happen when there are zero results — show related products, "did you mean," or just an empty state ?	-	Common UX gap.
6	Is there a minimum character count before search triggers ?	-	Avoids wasteful queries.
7	Should search support special characters, numbers, or multi-word phrases ?	-	Needed for validation rules.
8	Do you want to show trending search before the user started searching ?	-	Nice-to-have, really effective.
9	What happens if there is no exact search result ?	-	-
10	Do you want the search to show related products too ?	Low	Future enhancement.
